

The Sunday Content Engine

Give me one evening. I'll give you a week of content — the exact 4-tool stack, 3 copy-paste prompts, and a timed routine that turns a blank Sunday into 7 reels in your own voice.

The 3 Prompts	6
The Hook Bank	10
The Sunday Routine	12
Your first Sunday	14

Introduction

You saved the tier list because you want AI to do more of your work. Good. But a **list of 30 tools** doesn't make content — it makes you feel behind. This playbook does the opposite.

It picks one job most creators actually struggle with — **making content consistently** — and hands you the whole system to knock out a week of it in a single Sunday evening. Real prompts you paste and run. A routine with a clock on it. No theory.

What's inside

- The 4-tool stack for content (not 30 — four)
- 3 copy-paste prompts that do the heavy lifting
- 10 proven hook formulas you fill in
- An 85-minute Sunday routine, step by step

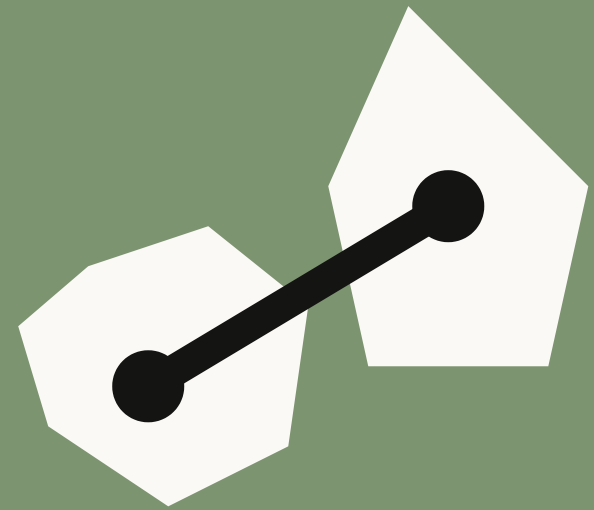

Who this is for

Solo creators and founders who want a result *this week* — not another course. If you can talk to a phone camera for 30 seconds, you can run this.

The honest timeline

About **85 minutes** start to finish once your voice profile is set up (Prompt 2, one time). Out the other side: 3 finished reels recorded, plus 4 more scripts banked for the week.

Everything here works on free tiers. Start with one Sunday. Let's go.

Chapter 1

The Stack

Four tools. One job.

Every extra tool is a decision you have to make at 9pm on a Sunday. So this is four — one per step of making a reel. Master these before you add anything.

- O1 Ideas — Perplexity**
Find what your audience is actually confused about — with live sources, so you're not guessing. Ask it: "what are beginners in [my niche] stuck on right now?"

- O2 Script — Claude**
Writes in your voice once you give it a voice profile (Prompt 2). Fast, natural, doesn't sound like a robot. This is your writing engine.

- O3 Visual — Canva / Poppy AI**
Thumbnails, carousels, on-screen text templates — on-brand in minutes. Poppy if you want AI to shape raw ideas into finished visuals.

- O4 Edit — Descript**
Edit video by deleting words in a transcript. The most beginner-proof editor there is — no timeline wrestling.

Full 30-tool list is in the DM you got — but you don't need it to start. You need these four.

Chapter 2

The 3 Prompts

The Content Engine

The workhorse. Paste it into Claude, fill the [brackets], and it returns a full week — 7 hooks, 7 scripts, 7 caption sets — in your voice.

PASTE INTO CLAUDE

PROMPT • COPY ME

You are my short-form content strategist.

My niche: [YOUR NICHE]

My audience + their #1 struggle: [WHO THEY ARE]

My handle + lead-magnet keyword: [@HANDLE / KEYWORD]

Here are two things I've written before, so you match my voice:

[PASTE CAPTION 1]

[PASTE CAPTION 2]

Give me 7 Instagram Reels for this week. For each:

1. A hook (first line, under 12 words) — curiosity gap, bold claim, or "don't do X".
2. A 30-second spoken script (~80 words) teaching ONE useful thing, ending:
"Follow [@HANDLE] and comment '[KEYWORD]' for [LEAD MAGNET]."
3. One on-screen text line per sentence.

Rules: start ON the hook, no "in today's video", no fluff.

Vary all 7 hooks so they don't feel repetitive.

Sound like you

Do this **once**. It teaches Claude your voice, then paste the result at the top of Prompt 1 forever after. This is the difference between "AI slop" and content that sounds like you wrote it.

ONE-TIME SETUP

PROMPT • COPY ME

Study how I write. Below are 3-5 things I've written (captions, texts, quick notes):

[PASTE 3-5 SAMPLES]

Extract my voice as a reusable profile:

- Sentence length + rhythm (short/punchy or long/flowing?)
- Words and phrases I actually use – and ones I never use
- Tone (blunt, warm, funny, plain?)
- How I open, and how I close

Return it as a "Voice Profile" block I can paste at the top of any future prompt. Then test it: rewrite this in my voice – "AI tools can save you time if you use them right."

Captions, done

The last mile. Feed it any script and it hands back the exact on-screen text, chunked and ready — so editing is just reading off a list. RUN PER REEL

PROMPT • COPY ME

Turn this script into on-screen captions for a talking-head Reel.

[PASTE SCRIPT]

Break it into short chunks (2-4 words) the way viral captions appear one line at a time. For each chunk give me:

- The exact words on screen
- Which single word to emphasize (I'll color it)
- An emoji only if it truly adds meaning (most lines: none)

Return a numbered list I can read straight off while editing.
Keep it clean and fast to read.

Three prompts. That's the whole writing system. Everything else is just pressing record.

Chapter 3

The Hook Bank

10 hooks that stop the scroll

Pulled from reels that pulled millions of views. Fill in the [brackets] — or feed them to Prompt 1 and let it write around them.

1. “What happens when you ask [TOOL] to [BIG TASK]?”

Curiosity gap — the brain needs to know the result.

2. “Don't use [TOOL] unless you've set up these [N] things.”

Fear of doing it wrong. Stops the scroll cold.

3. “[TOOL] just killed [OLD WAY].”

Bold claim + news energy. Feels urgent.

4. “[BIG COMPANY] dropped [N] free tools that replace [PAID THING].”

Free + specific savings = instant save.

5. “I ranked every [CATEGORY] tool so you don't have to.”

You did the work for them. Authority + shortcut.

6. “The [ROLE] tier list nobody asked for.”

Pattern interrupt. Playful, screenshots well.

7. “You're using [COMMON TOOL] wrong. Do this instead.”

Calls them out gently — they must check.

8. “I tried [TOOL] for [TIMEFRAME]. Here's what happened.”

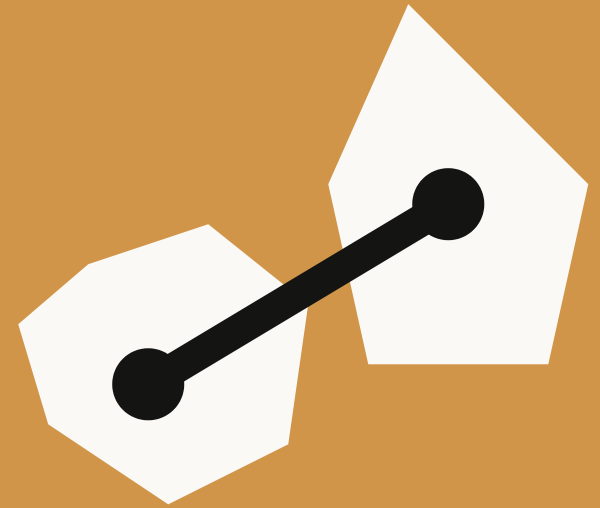

Story + proof. Feels honest, not salesy.

9. “Steal my [WORKFLOW] that does [OUTCOME] while you sleep.”

Permission to take + dream outcome.

10. “Tired of [PAIN]? Here are [N] free fixes.”

Names their pain, promises relief, no cost.

Chapter 4

The Sunday Routine

One evening. ~85 minutes.

Put a clock on it. The point isn't perfect — it's *done*. Three reels live beats ten in your head.

- 1 Brain-dump 3 struggles** 10 min
Write 3 things your audience is stuck on. Blank? Ask Perplexity: “what are beginners in [niche] confused about right now?”

- 2 Run the Content Engine** 5 min
Paste Prompt 1 into Claude (with your Voice Profile on top). Get 7 reels back.

- 3 Cut to the best 3** 10 min
Trust the hooks that made YOU stop reading. Kill the rest — you have 4 banked for next week.

- 4 Generate captions** 15 min
Run Prompt 3 on each of the 3. On-screen text is now ready to read off while you edit.

- 5 Record + edit** 45 min
Film all 3 back-to-back — one outfit, one sitting. Drop into Descript, edit by deleting text. Done.

Out the other side: 3 finished reels + 4 scripts banked. That's your week.

BEFORE → AFTER

What the engine changes

Same idea — "AI tools for business". One bounces in two seconds. One earns the follow. The only difference is the system.

× WITHOUT THE ENGINE

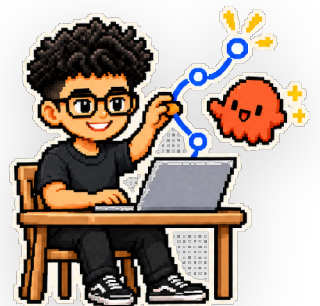

"Hey guys, so in today's video I want to talk about some AI tools that can help your business. AI is really powerful and there are so many tools out there..."

No hook. Slow open. They're gone before the value.

✓ WITH THE ENGINE

"You're using ChatGPT wrong — do this instead. Most people ask it questions. Do this and it builds you a week of content: paste your last 2 posts, say 'match my voice, give me 7 hooks + scripts'... Follow and comment 'tools' for the full setup."

Hook first. One idea. Clear CTA. Saved.

Your first Sunday

Don't read this twice — run it once. Block 85 minutes this Sunday, set your Voice Profile with Prompt 2, and ship three reels. That's the whole game: one system, run weekly, compounding.

Want the **automation version** — where this runs itself and drops finished scripts in your inbox? Follow **@kaiships.ai** and comment **"engine"** on any post. That's the next playbook.
